

Free for every student, everywhere

Expert education in **any subject** — **free, in your language.**

Talent is universal. Access isn't.

Quality education is gatekept by geography, wealth, and language. LearnBridge removes all three barriers at once.

Opportunity isn't equal

Where you're born, what your family earns, and the language you speak still decide the quality of education you can reach. Three barriers, stacked on top of each other.

Geography

Expert teachers cluster in a handful of cities. Rural and remote students are simply out of range.

Wealth

Quality tutoring and elite schooling sit behind fees most families can't pay.

Language

The best material exists in a few dominant languages — leaving billions reading a translation, if anything.

Free, expert education — matched to your exact problem

LearnBridge is a web platform where any student, anywhere, describes their confusion in their own language and gets matched to expert video courses with an AI tutor beside them. Students pay nothing. The whole thing is funded by corporate sponsors and the teachers get paid per lesson.

Students pay nothing

100% free to learn. No paywall, no subscription, no signup required to search.

Sponsors fund content

Companies fund courses by subject — for brand reach in emerging markets and CSR mandates.

Teachers get paid

Educators earn per lesson delivered, so great teaching scales without charging students.

From confusion to certificate

1

Ask in any language

Type what you're stuck on into one search bar — Hindi, French, German, English, anything.

2

AI matches you

Claude detects your language, subject, concept and level, then returns the 3 best courses.

3

Learn by video

Open a course and watch real embedded lessons from world-class educators, inline.

4

Think with a tutor

A Socratic AI tutor asks guiding questions in your language — it never just hands over answers.

5

Earn a certificate

Finish the course and get a shareable certificate of completion.

6

Meet a human tutor

Optionally connect to a live human tutor matched to your subject.

Type your confusion in any language

This is the heart of the product. The student's raw text goes to Claude, which identifies the language, subject, concept and difficulty, then returns the three best-matched courses with a reason — never defaulting to one subject.

DETECTED

language **French**

subject **Biology**

concept **DNA & genetics**

level **Beginner**

matched **3 courses + reason**

Same search bar, four languages, four subjects:

“मुझे photosynthesis समझाओ”

Hindi → Biology · Photosynthesis

“Why does gravity work?”

English → Physics · Gravitation

“Qu'est-ce que l'ADN ?”

French → Biology · Genetics

“Erkläre die Pythagoras-Formel”

German → Mathematics · Geometry

A tutor that never gives you the answer

Socratic Tutor

What's the derivative of x^2 ?

Good — let's get there together. What does a derivative measure about a curve at a point?

The slope?

Exactly. So what changes as x grows?

Asks, never tells

Guiding questions and hints lead students to discover the answer themselves.

Anchored to the lesson

Stays tied to the exact material on the page — no wandering, no spoilers.

Replies in your language

Responds in whatever language the student writes in, every time.

A real, funded product — not a prototype

✓ Multilingual search front and center

One bar, any language, no signup required to start.

✓ Mission stated, not buried

“Quality education is gatekept by geography, wealth, and language.”

✓ Live the moment you land

Suggested queries in Hindi, French and more invite a first try.

Real lessons, a certificate, and offline-ready

[← Courses](#) > [Computer Science Fundamentals](#)

Computer Science

Beginner

Computer Science Fundamentals

A complete introduction to computer science — from how computers work at the lowest level to writing your first algorithms. No prior experience needed.

**Prof. David Miller**
MIT OpenCourseWare
20 years teaching CS at MIT. Author of 3 textbooks on algorithms.

What you'll learn

- ✓ How computers represent and process data
- ✓ Core algorithmic thinking
- ✓ Data structures: arrays, trees, graphs
- ✓ How the internet works
- ✓ Introduction to programming logic

Course Roadmap

5 lectures · 13 materials

01

What is a Computer?
What is computation? How do machines think?

3 hours · 4 items >

🕒 8 weeks · 32 hours

📖 5 lectures · 13 resources

🏆 **Certificate on completion**

👤 Free · Sponsored by Google

Enroll for free →

📶 **Download for offline** · 84 MB

🖱️ Videos, readings, and the AI tutor work fully offline once downloaded.

Certificate included

Certificate in Computer Science Fundamentals

"Building the next generation of engineers."
— Google

Embedded video lessons

Real courses from CS50, 3Blue1Brown, MIT, CrashCourse and more.

Certificate on completion

A shareable credential when a student finishes the course.

Visible sponsor badge

Every course shows who funds it — e.g. "Sponsored by Google."

Download for offline

Lessons and the AI tutor work fully offline once downloaded.

Sponsors fund the classroom

Students never pay. Companies sponsor courses by subject category — gaining brand reach in fast-growing emerging markets, meeting CSR and education mandates, and receiving anonymized student-impact metrics.

Google

SAP

Siemens

Bayer

Deutsche Bank

UNICEF

McKinsey

Bosch

Brand reach

Visibility with the next billion learners in emerging markets.

CSR mandates

A measurable, credible way to fund education at scale.

Impact metrics

Reach and engagement reported back by subject category.

Download once. Learn offline. Even the AI tutor.

Courses download in one tap

Save a course once on a connection — then learn with no data afterward.

The tutor runs on-device

The Socratic tutor keeps working offline, so guidance never depends on a signal.

Designed for the last mile

Built for rural and low-connectivity learners who are usually left out.

Built to reach the unreachable

Numbers reflect the platform's launch targets and current catalog.

20 expert courses across 16 subjects

From computer science to public health — taught by a deliberately global faculty. Diverse teachers aren't a footnote; they're the mission made visible.

Dr. Angela Yu

App Brewery, London

“

A 14-year-old in rural Africa deserves the same education as an elite school student.

Talent is universal. Access isn't. LearnBridge exists to close that gap.
